

Apple Mail Authenticated SMTP Setup

1. Click on "Mail" and then "Add Account" to add a new email account

2. Select "Other Mail Account" from the selection and click "Continue"

3. Enter your Name, Email Address and Password as supplied and click on "Sign In"

@ Add a Mail account

To get started, fill out the following information:

Name:

Email Address:

Password:

4. In the next window, select IMAP from the Account Type drop-down; ignore the "Unable to verify account name or password" error in red as this will repair itself once the Incoming and Outgoing Mail Server details are correctly entered in the following steps

Email Address:

User Name:

Password:

Account Type: IMAP
 POP

Incoming Mail Server:

Outgoing Mail Server:

Unable to verify account name or password.

5. Enter in your Incoming Mail Server and Outgoing Mail Server as follows, and select "Sign In":
Incoming Mail Server – imap.adept.co.za
Outgoing Mail Server – smtp.adept.co.za

Email Address:

User Name:

Password:

Account Type:

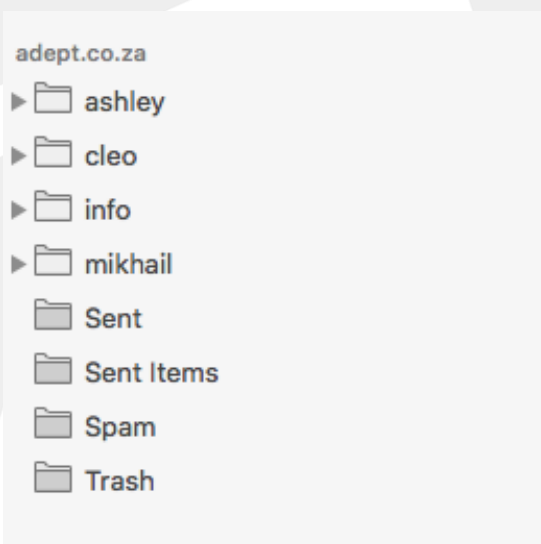

Incoming Mail Server:

Outgoing Mail Server:

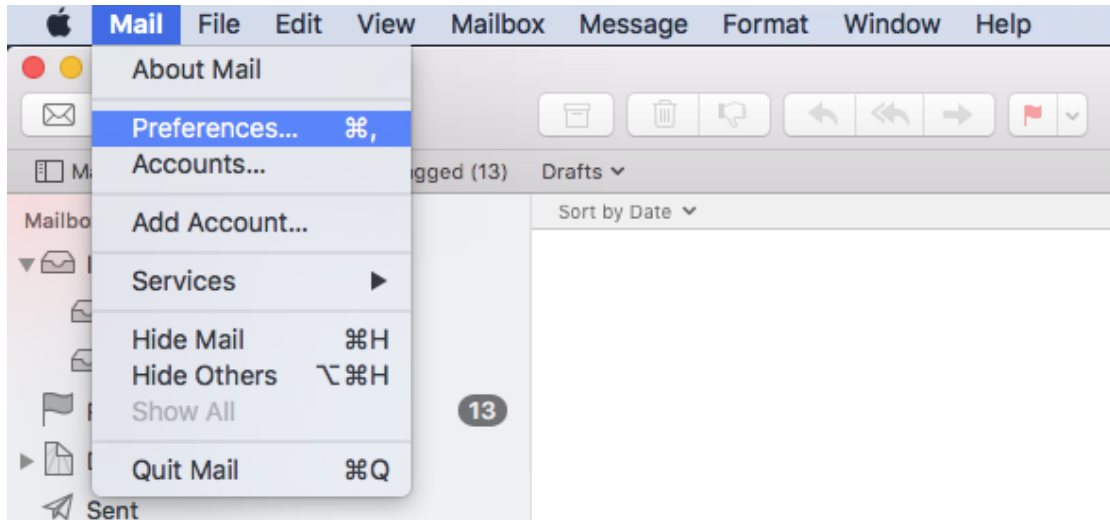

Unable to verify account name or password.

If your settings are correct, the mailbox will be created on your Apple Mail email application.

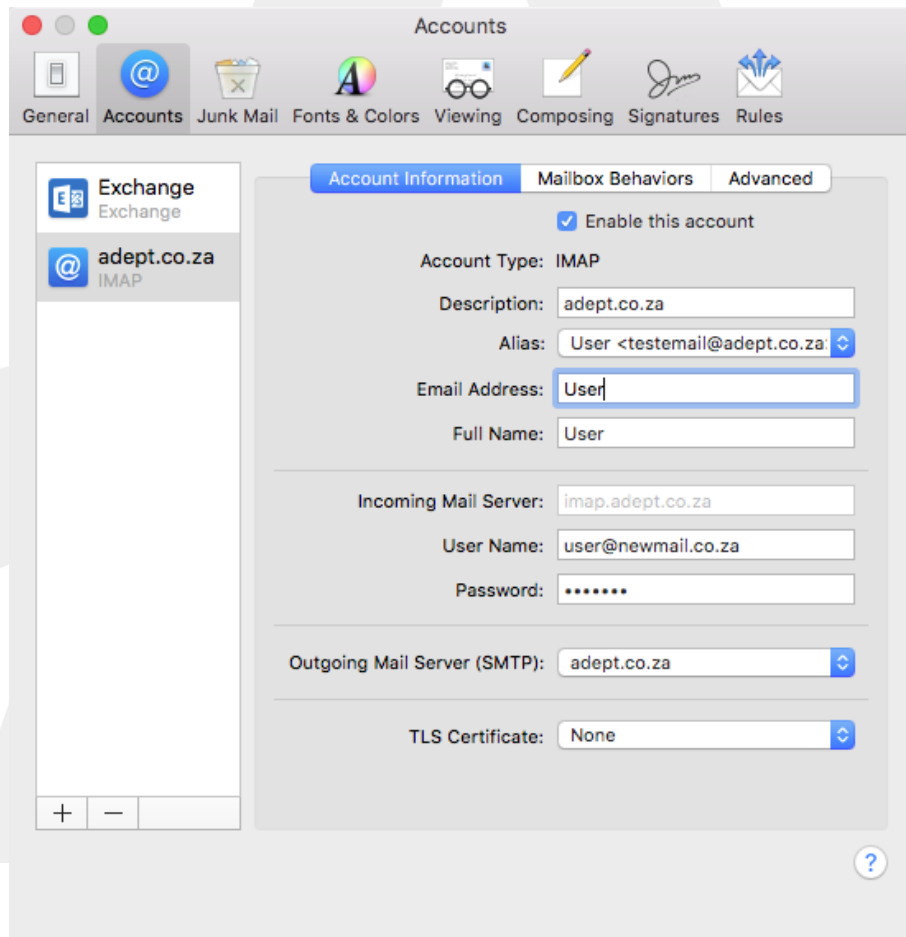

NOTE: Your IMAP mailbox folders as created and stored on the mail server (if setting up a mail client/Mac on an existing email account) will be displayed in the left window of your Apple Mail application:

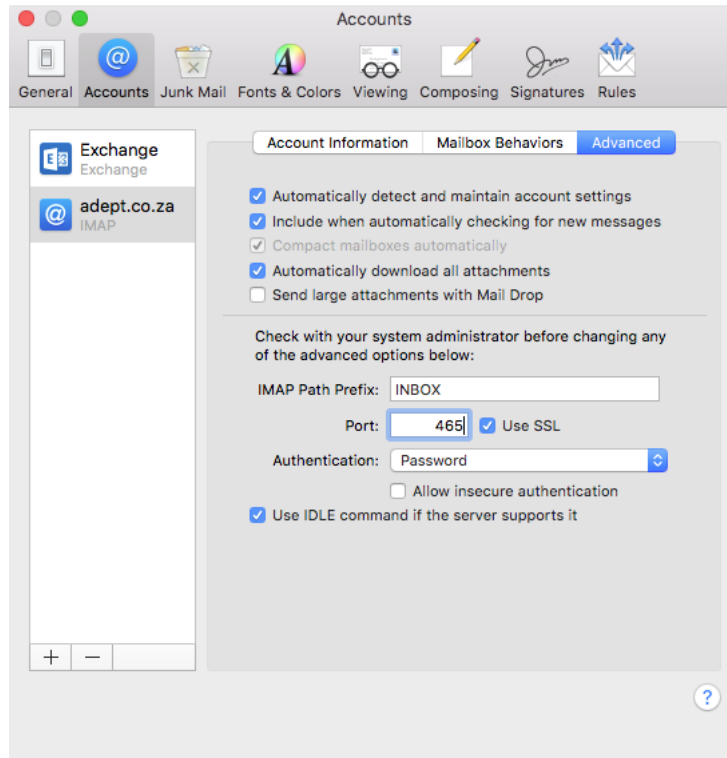

6. To ensure the correct Authenticated SMTP settings, complete the following steps:
 - a. Click on "Mail" and then on "Preferences"

- b. Click on "Accounts" and select the email account that you have just set up

- c. Click on Advanced and change the following information:
Port: Change the port number to one of either 443, 465 or 587
Ensure that "Use SSL" is checked

- d. Click on the red circle in the top left hand corner of the window and select "Save"; your Mimecast setup is now complete
